

Sakshi: Evidence That Only You Can See

A privacy-first Android assistant that recognises harassment patterns on the phone, keeps integrity-hashed evidence, and builds a complaint-ready timeline without any message leaving the device.

PROBLEM STATEMENT

Domestic Abuse Survivors

Scattered Evidence: Evidence is spread across multiple apps and files.

Privacy Risks: Sensitive evidence may be unsafe on cloud services.

Difficult Documentation: Stress makes incidents hard to record accurately.

Hidden Patterns: Repeated abuse and escalation are difficult to track.

Complex Reporting: Organizing evidence into a clear report is time-consuming.

Cyberbullying and Online Harassment Victims

Multi-Platform Harassment: Abuse occurs across multiple apps and platforms.

Lost Evidence: Messages and profiles can be deleted or changed.

Poor Evidence Capture: Important details like usernames, URLs, and timestamps may be missed.

Hidden Escalation: Repeated incidents are difficult to track across platforms.

Students facing bullying

Afraid to Speak Up: Fear of punishment, embarrassment, retaliation, or not being believed.

Difficulty Explaining Incidents: Children may struggle to describe what happened or what details matter.

Hidden Online Bullying: Abuse can occur in private chats, DMs, gaming communities, and groups.

Scattered Evidence: Messages and screenshots can be spread across multiple apps or easily lost.

OUR SOLUTION

Detect

- Scans the user's own messages, emails, and call logs on-device to spot bullying, threats, and harassment patterns.
- Uses local NLP models to flag repeated insults, sexual/caste slurs, doxxing attempts, and controlling language.
- Assigns risk scores (low/medium/high) per conversation/thread; high-risk threads are surfaced for review.

Explain

- Local LLM summarizes flagged conversations into plain-language incident notes.
- Every AI summary is linked back to its source (message ID, timestamp, email subject) so nothing is a "mystery output."
- Shows why something was flagged (e.g., "repeated threats + name-calling over 2 weeks") to build trust and reduce false alarms.

Preserve

- Stores all raw items (messages, screenshots, voice notes) and AI outputs in an encrypted local vault (SQLCipher / libsodium).
- Maintains a SHA-256 hash chain over all entries for tamper evidence; originals are never modified.
- Disguised shell (looks like calculator/notes), duress PIN with decoy vault, and minimal metadata to reduce discovery risk.

Report

- Generates a timeline PDF with:
 - Incident summaries (user-confirmed)
 - Evidence index linked to source items
 - Hash manifest as "proof of existence"
- Provides draft complaints for school, police, or lawyer, with clear disclaimers that this is not legal advice.
- Supports safe, user-initiated encrypted export to a trusted person or device.

FLOW CHART

TECH STACK

Sakshi – Tech Stack

Local • Private • Secure • Empowering

USER JOURNEY

**Sakshi
Detects/Accesses
Relevant Evidence**
Messages • Photos •
Audio • Notes

1

**Sakshi Detects/Accesses
Relevant Evidence**
Messages, Photos Audio,
Notes

2

**Local AI Organizes
Evidence**
Extracts dates, threats,
people, incident details

3

**Victim Reviews &
Confirms**
Corrects or removes
anything inaccurate

4

**Incident Timeline
Created**
Repeated incidents and
escalation become visible

5

**Evidence Integrity
Protected**
Original files preserved +
hashes generated

6

**Generate Structured
Report**
Timeline + evidence
references + supporting
details

7

USER INTERFACE

FUTURE SCALING AND SCOPE

- **Expand Language Support:** Add more Indic and global languages for local STT, OCR, and AI processing.
- **Add More Case Packs:** Support workplace harassment, online abuse, tenant disputes, and other documentation needs.
- **Strengthen Security:** Introduce split-key recovery, formal security audits, and stronger threat modeling.
- **Scale to Mobile:** Extend the local-first system to Android and iOS for wider accessibility.
- **Build Trusted Partnerships:** Work with NGOs, legal-aid organizations, shelters, and support networks for responsible deployment.
